The Beauty that Sports Cars Possess

Cars, in general, possess both form and function. The designers did not compromise aesthetics with performance.

However, there is something about sports cars that make them stand out when it comes to beauty. And we are not talking about external features only.

There is more to physical features like, sleekness of the car, that determine its beauty.

Here are some of the characteristics that endear sports cars to car enthusiasts.

- Sports cars have attitude at first glance.

Sports cars speak the attitude that they possess. They are not like mere cars whose presence can be ignored. They captivate the eyes of those who see them. They imply that thrill and enjoyment can be expected when their hands are those that control the wheel.

Sports cars stand above other cars, that are seen every day, primarily because the designs imply what they are capable of doing. A sleek look really matches a car with sleek activities.

- Sports cars possess greater power.

Their power comes from their more powerful engines and has other specifications than other the cars have. A sports car can do more than ordinary tasks because of the features that only they possess.

- Sports cars are made for driving pleasure.

Ordinary cars make driving monotonous and boring, while on the other hand, sports cars primarily aim to give the drivers a "high" feeling of speed and control. Only sports cars can provide that need for drivers who seek adventure.

Sports cars bring the thrill back to driving. They express what other cars can not. Sports cars are not designed just for practicality, but for pleasure too.

- Sports cars are made for drivers who enjoy their "wild side".

Drivers do have the need to express this "wild side". Sports cars make any road a venue to satisfy those needs. Only sports cars can match the "wildness" that drivers innately have. For that reason, sports cars perfectly compliment the child in every driver.

- Sports cars have evolved and improved through the years.

Drivers appreciate the improvements that have been made to sports cars. You could say that sports car technology has infinite possibilities. The stereotypes of sports cars have long been debunked. Those limits have been crossed. The only thing that car enthusiasts can do is to watch as these improvements unfold before their very eyes.

- Sports cars make their owners feel good about themselves.

Sports cars are lifeless. They cannot feel proud because they are beautiful, but their owners take pride in having them.

With all these things said about the intrinsic and extrinsic beauty that sports cars possess, only a person who does not appreciate their beauty and/or speed will not opt to get one.

The best sports cars

Sports cars are fascinating vehicles. Their features make them stand out among other car types. But there still is competition among sports cars. It is fascinating to talk about these sports cars and why they stand out above their contemporaries.

Here are some of the 2006 vehicles that made the list of best sports car and the qualities that made them above average.

- Audi A3 2.0T

This car goes beyond the beauty of its exterior. Car enthusiasts appreciate the car's responsiveness and agility.

Audi A3 2.0T comes with an intercooled, turbo charged engine with 2.0 liter capacity and 16 valves. The car promises to deliver power up to 197 mph at 5100 rpm.

Other features include a six speed manual transmission, front-wheel type of driveline, 101.5 in. wheelbase and curb weight of 3300 - 3350 lbs.

- Chevrolet Corvette

The car's V-8 engine (7.0 liter) with 16 valves allows for greater speed, and because the car is lighter than regular cars, the Chevrolet Corvette is capable of accelerating up to 125 mph in 12 seconds within one-fourth of a mile.

The car's braking system is impressive. The car's reflex is also astounding.

The car comes with the following specifications: rear-wheel type of driveline, and curb weight within 3100 - 3300 lbs.

-Honda Accord

The car comes with its fresh look: revised interiors, rear and front styling, and better sound-minimizing capability.

Honda Accord still boasts of its qualities such as high value for resale, excellent construction and reliability.

V6 Accords are equipped with a new stable system and improved suspension.

This car also has the following specifications: front- wheel type of driveline, 3100 to 3600 lbs. curb weight, up to 107.9 in. wheelbase and 5 or 6 speed manual transmission.

- Porsche Boxster

The Porsche Boxster speaks well about its balance. Pair this quality with an increase in power delivered by its 24-valve DOHC engine with 2.7 liters capacity.

The braking system is as remarkable as is the car's over-all aggressive appeal.

Other features of the car include:

A rear-wheel type of driveline, 95.1 in. wheelbase, and curb weight within 2900 -3100 lbs.

Truly, sports cars did evolve and they will continue to evolve as long as there is competition. Car enthusiasts can expect more remarkable features in sports cars as years go by.

Tips on how to get the most off a budget car rental

Budget car rentals are a traveler's savior from being stranded in one place and from expensive taxi rides. But with today's competitive market, I won't be surprised that from trying to rent a car you end up renting a lawnmower instead. Well maybe not a lawnmower, but sometimes, well most of the time, the people that assist you in car rentals just doesn't have your best interest in mind, so you end up paying a truckload of money for a pool of frustrations. To avoid this here are a few tips to get the budget, out of budget car rental.

1. If you're not choosy with a budget car rental, try to get a budget car rental through sites that let you rent cars at your own price. These firms will try to get the best deal for the car that you'll get and might just toss in unlimited mileage and upgrades, all of that without spending an extra dime out of budget.
2. Look for package deals, fly-drive-stay, or fly- drive, most of these packages give great discounts for rentals, but don't do it with an airline, airlines although convenient aren't really the more economic way to go, their budget car rental prices are hardly budget, and tend to be higher than those of outside firms.
3. Use the internet to reserve a rental car. Ah, the internet, what other good can it provide? Yes there are budget car rentals on the internet that can give you a better bargain. Some budget car rental sites even go as far as internet only discounts. Aside from that you can easily get upgrades and depending on the season, at least one rental company is bound to have a special offer that can help you save money, plus, you can rent a car in the comfort of your own home, beat that!
4. Ask for discounts that can be applicable to you, remember even when you've scored the best deal, there is still that one last ditch of a possibility that one of your credit cards support the company and provide discounts or that your frequent flyer program or military service can put that budget in budget car rental, its along shot but its worth a try.
5. Most budget car rentals are low on maintenance so when you rent a car, check all sides for damage, and I mean every side and every nook and cranny of that car, make sure to inform the renter of these so that you wont have to pay for damages once you return the car. In addition, try to check out all the accessories, wipers, radio, brakes, seatbelts etc, to familiarize yourself with them, and also to check if they work, like the previous tip, you might be charged for this if you don't inform them.
6. Now we pass the subject of insurance, sometimes your own car insurance covers car rentals, so have a look see before you buy insurance from the rental firm. Budget car rental insurance doesn't cost much, but if you already have one why buy another? Car rental insurance is always required when you rent a car.
7. Another money saving tip is to pick up your car early in the morning, make it so that the firm is just opening, this is because at this time most of the budget car rentals haven't been returned yet, and you may get an upgrade for a lower price.

Duh, It's A Car Stereo!

Pretty self-explanatory isn't it? It's a stereo system in a car, you say. Whoa, hold your horses, it's not that simple. Although some people like to put home stereos in their cars and vans (out of dire need for some sounds), sometimes it just doesn't work. Yeah, maybe before it could've worked just fine, all you needed was radio and a cassette player (or 8 tracks, for the inner dinosaur in you) so sure, lug those big box speakers into the back seat and you'll be blaring down the highway. But nowadays there are things like cd players and mp3 players and your popup LCD panels and all that techie knickknack you'd think they'd like to build a home theater system right smack on the console of your van. If you don't know anything about these things but would like to have some sounds in your car anyway, here are some things to know about a car stereo.

As mentioned above, at first units and speakers from home audio systems and professional markets were just simply installed into vehicles. However, they were not well suited to the extremes of temperature and vibration which are a normal part of the environment of an automobile. Car stereo enthusiasts were not satisfied with the sound quality of regular car sound systems, and with the advent of the CD player, they really had to start modifying some of these home stereos in order to work well in a car environment and voila!, now we have the modern car stereo.

If you have a new car, first hand bought, say from about 90 to present, chances are you already have a “factory” car stereo in your car. It means the car manufacturer already included a car stereo system in your car, unless specified in the car model but most often this is the case. Some car manufacturers make their own car stereos, like BMW which includes a pretty decent car stereo package head unit and speakers. It is a standard which comes with all their cars (which isn't surprising considering that BMW is included in the league of “luxury car manufacturers”). Or like Mercedes Benz or Volkswagen, they use car stereo systems from a German audio manufacturer called Blaupunkt.

A standard car stereo (also called a head unit) usually includes an auto-reverse tape deck, a cd player and sometimes the optional changer a device which automatically changes the cd in play. On newer car models, the car stereo can also play mp3s and other digital audio file types like WMA and AAC, whether on a cd or a memory device which can be hooked up to the head unit.

The car stereo head unit is connected to several speakers. Older car models usually just had one speaker mounted underneath the dashboard, pointing through perforations towards the front windshield. The standard for car stereo nowadays is a pair of “tweeters” (used to bring out high treble) on the driver side/front passenger side dashboard, a pair of normal “mid” speakers on both doors, sometimes even the backseat passenger doors if it's a large car and larger speakers capable of bringing out low ends at the back portion of the backseats.

Your car stereo is probably ok as it is, as car manufacturers ensure that the audio products that come with their cars can handle most driver's listening demands. But if you think that what you have isn't enough, you can always CUSTOMIZE.

How to: A Car Stereo Installation Guide

Want to save some money? Ever wonder if you could do a car stereo installation yourself? Yes, you can do it yourself! Go ahead, spend that money on your hardware! Don't spend it on labor. Besides, doing a car stereo installation yourself can be a very rewarding experience, not to mention you can learn a lot from it too. Nothing beats the feeling of seeing your "creation" in action, running smoothly and perfectly.

But be very careful, you really won't want to damage your expensive hardware. Well, most car audio hardware are no-brainers to install, you'd find that most of the time the parts have specially shaped sockets and slots etc. and would only fit where it's supposed to be installed. Still, it's best to proceed methodically.

In a car stereo installation, you have to determine what kind of rig you're going to put into your vehicle. If you're a beginner, it's best you do a car stereo installation if it's just a simple system. You may want to leave the complicated stuff to the professionals, like installing delicate equipment like LCD panels, motorized parts etc. especially if it requires the creation of custom panels and such.

Head units are one of the easiest to do in a car stereo installation. Fortunately, most units follow the same size standards (DIN). In many cars, once the factory radio is removed the aftermarket radio will fit in the hole. In many other cars, a kit is needed if the factory hole is too big, or not deep enough. In some cases the dash has to be cut. Any car stereo store should have kits required for installation.

There are two types of mounting in a car stereo installation. ISO mounting is when the radio can be screwed to existing factory radio brackets, such as in most Japanese cars. Ring mounting is when an aftermarket radio comes with a metal ring that gets mounted to the factory radio hole or aftermarket kit via bendable tabs. In many cars, dash and trim rings have to be filed to enlarge the radio hole. Once the ring is installed, the radio slides in and is held by snaps. In most cases, special tools are required to remove the radio.

Speakers are very critical in a car stereo installation. No matter how expensive your speakers are, if they are not properly installed, the sound will not be up to par.

In a simple car stereo installation, you'll probably be using speakers that fit into a factory location. Just make sure there are no gaps or holes. Sometimes building a wood or fiberglass baffle helps reduce holes and gives you much better sound. But always be careful when using power tools around speakers. Car stereo installation warranties usually don't cover holes in speakers.

For unconventional speaker locations, sometimes metal has to be cut. You might want to leave this to the professionals, tools like plasma cutters and pneumatics drills are required. But if you're going to insist, a pair of metal snips (left and right cut) will do.

A car stereo installation has to put up with vibrations and other noise sources in its environment. Even though it is impossible to eliminate these completely, there are products that will greatly decrease the noise and rattling, particularly on non-luxury cars. Liners, sprays and adhesive strips and even carpeting applied onto the panels can make a world of difference.

Car Stereo Speaker: Let Your Car Stereo Speak For Itself

Even if you're not a car audio connoisseur, it's easy to be impressed with a car stereo speaker while looking around in an expo or convention. They're the first thing you'll probably notice, they come in different colors, shapes and sizes. Those big throbbing concaves blaring incredibly low bass lines or cool little tweeters whistling out seething treble sounds.

Car stereo speakers are interesting and very tempting to buy, especially the big loud ones. But big is not always the best. Each speaker has its own unique quality, intended use and price range. Some may also be better than others at certain things so it pays to investigate your type of car stereo amplifier or head unit before you finally decide on a car stereo speaker for your system. Here are some features to consider:

Car stereo speakers are not all the same size and wattage, and this can cause a problem once you try to hook it up in your car. Know the specs of your system. Sort this out ahead of time, it will save you a lot of hassle. You will be happier with your new acquisition if you can get to see it in action as soon as possible.

There are also a lot of car stereo amplifiers on the market, it pays to be aware of how the car stereo speaker you are considering compares to the others, and how compatible it is to your amplifier or the amplifier you're planning to buy. Car stereo speakers and amplifiers go hand in hand. You'll want the car stereo speakers you buy to be suitable for your automotive entertainment needs and not strain the system.

Style can be an important factor when choosing your special car stereo speakers. You'll want the one you choose to fit in perfectly with your other all sorts of stereo speakers. If you're planning to install something different, you have to take into consideration the modifications your going to have to make in order to accommodate your new car stereo speakers.

One of the biggest issues in buying a new type of car stereo speaker is suitability. How suitable your car stereo speakers are is probably the biggest issue. Don't forget the reason you're buying the type of car stereo amplifier in the first place, and ensure that the all sorts of stereo speakers you are looking at will do the job you need no matter what other fancy features they may offer.

Brand is an important consideration when you are shopping for a car stereo speaker. The fact is, one brand of type of car stereo amplifier may have a much better reputation than another, and for good reason. You be the judge. Do your research. Ask car audio enthusiasts. Read magazines and reviews. Do you want to take a chance on just any car stereo speakers, or go for the proven name brand?

Lastly, price is important even if you think it's not. After all, would you want to pay more for your car stereo speakers only to find it cheaper the next day at a different store? Nobody likes that. When shopping for better car stereo speakers, it pays to check at least a couple of different stores, just to make sure you're getting your car stereo speakers at the best price.

Pimp Up Yo Ride! Why You Need A Good Car Stereo System.

You've got a nice pearled paint job. You've got your 18 sized chrome mags. You've got an interior job that looks like a dream. But all of that would be superficial if you don't have a good car stereo system in your ride.

A good car stereo system is a marvel to experience, just like a poorly constructed car stereo system is such a pity to look at. The price is a big factor, but not all expensive hardware perform well if installed haphazardly, or if hooked up with incompatible hardware. It is also subjective, just as some of us find black cars more appealing than other color cars. If you like your car stereo system more than any other in the same vehicle, then you have the best.

If you like some other car stereo system more than yours in the same vehicle, then that one is better. Only you can decide which is best for you. For a car stereo system to be a good or great, it must first meet or exceed the user's expectations.

The type of vehicle also plays a major part in what kind car stereo system you should build. For some people, after only being in a few vehicles their ears recognize the inherent characteristics of this unique environment. Most of what we hear in a vehicle is a recording of the original artist in a given environment, usually in two channel stereo which can be playing in a totally different environment with the listeners placed in awkward listening positions relative to the placement of speakers. A great car stereo system is created with the understanding of acoustics, basic electronics, and the different products that are to be used.

A good idea is to gain references to compare to your auto audio system or any other and experience it live in as many different environments as possible. One of the best ways to accomplish this is to go to expos and conventions. As you hop from exhibit to exhibit you'll immediately notice the difference in sound characteristics of each setup. You will find some car stereo systems that you prefer over others, if not a favorite and that is the way to choose a cheap car stereo system that you like. Also ask for specs, they'll gladly give it to you.

The benefits of aftermarket speakers are: they have a larger frequency response (more music coming through the car stereo speakers), more power handling capabilities, they will brighten your highs and increase your auto audio system bass. There are two types of CAR speakers available: the dual cone and the two way. A dual cone has a small paper cone built into a larger paper cone.

Amplifiers are the backbone of your car stereo system. Weak amplifiers damage good car stereo speakers, not the other way around. Amplifiers provides musical power and contributes greatly to the elimination of distortion and the upgrade of sound clarity. The size of the amplifiers will be proportionate to the level of power you want. You can tell a good power amp by turning the auto stereo system above half volume and still hearing clear amplification. Bear in mind that the more power you have the better control you have over your system.

A good car stereo system is something to show for. It can bring satisfaction to you, the owner, and to those who will witness it. It will also raise the quality and value of your car in case you wish to resell it.

How to get a car rental

There's more to renting the car than just reserving it and paying for it, to make sure that you get the best deal follow these steps and tips.

STEPS:

1. Choose three to four car rental firms that fit your wants and needs, do this either through the phonebook, or through the internet, remember to scan every possible firm before you make a choice, you don't want to overlook the best car rental because you got bored from looking
2. Contact the agency and ask about their special offers, location, availability, pickup sites, rates, special rates, hotel and airline partnerships, extra charges, insurance, everything you can think of that can help lower what you have to pay for your car rental, or what would make the car rental more convenient for you.
3. Choose a pickup point; find one that is near you so it won't be a hassle, some car rental companies pay for the cab ride you have to take, some pick you up at your home or at the airport to take you to your rental.
4. Pick a car, depending on your needs, find a car that could fit all the people you'll have in it, and if you're alone just use a compact, some rentals charge higher for larger vehicles.
5. The next thing to do, after you've totally decided on which to take, remember to reserve it, some car rentals include the reservation fee on the overall rent, some make it out to be an extra fee, you should also look out for this when get a car rental.

TIPS

For the best deals for your money here are some tips when looking, finding and taking out a car rental.

1. When getting a car rental check for available upgrades at no charge, you'd want the best deal so you'd want the best car, to do this, you should go pickup your car early in the morning, when the other cars haven't been returned yet, this way there would be a shortage on economy cars and the firm might just give you an upgrade for a lower price.
2. Get an internet car rental. These types of rentals offer internet only discounts, and sometimes even accepts find a car at your own price methods where you just give them your budget and they'll find the best deal for you, plus you won't have to go anywhere to get a rental.
3. Fill the gas tank before you return your car, car rentals will charge you, at an inflated price, the cost of the gas needed to fill the tank.
4. Look for packages like fly-drive-stay or fly-drive, these will get you great discounts on rentals, and what's more you won't have to worry about other details like a hotel or an airline, everything's there. You can find these packages on most travel agencies.
5. If your frequent flyer discount or free flight is about to expire, there are some car rental companies

that offer to exchange these discounts to discounts on your car rental, although its more cost effective to just fly with your frequent flyer discount, if its going to expire anyway, why wait?

These are just a few of the things you'll need to know, but always remember to be pesky, ask questions, ask for discounts, the only reason why people don't get better value for the things they buy is because they're too shy to ask.

Cheap Car Rental

In today's world of competitive marketing and cutthroat competition, a customer can't really predict whether the deal he/she is closing will benefit her or not, most of the time most, consumers, just go on with the deal just to avoid all the hassle of inquiring for more economic alternatives, or discounts. This also applies to car rentals, nowadays, it's hard to call anything a cheap car rental, with the inflation rate of products, continuing gas price increase it's hard to keep product prices down, so here are a few tips to keep your car rentals cheap, even if every other factor is making it expensive.

1. Reserve your cheap car rental internet sites instead of over the counter ones. Internet sites, offer internet only discounts which could very beneficial for you, cheap car rentals can be achieved by being witty, put discounts like these to your advantage and you're sure to save a lot.
2. One way to get cheap car rentals is to try to get the most out of your rental. Most car rentals require you to fill the tank when you return it, so on your way to returning the rented car, fill it up with the cheapest type of gas you could find, you'll save more than when they make you pay for the gas at an inflated rate.
3. If you can, always rent at only one Car Company, companies give you cheap car rentals for frequently renting their cars, discounts, coupons and sometimes even miles.
4. Ask the car rentals if you can exchange your flyers miles for car rental miles. This is especially useful when your flyer's miles is about to expire, instead of just letting it go to waste, get a cheap car rental for it.
5. For a cheap car rental, try to make reservations as early as possible, car rental; companies give discounts for customers who reserve early.
6. To get your rental cheaper, pick up your car early in the morning, just as the shop is opening, so that there will be a shortage on the cheap car rentals, at this point, the renters may give you a free or a marked down upgrade.
7. Look for packages like hotels and rental packages or if you want a cheaper car rental find a package that includes air fare, car rental and hotel stay, these packages give you great discounts on all three, so if you're planning to do all, I suggest you get a package deal to get the most out of your money.
8. To get a cheap car rental at your own, price, find rent-at-your-own-price internet sites that look for the best possible deal with the budget that you've given them, but be careful with this, review the company's history first before you get into it, or make sure that there are no other cheaper means before you close the deal, remember, once you make a reservation, you can't cancel it.
9. If you're going to use the car for more than five days try to find weekly rates from car rentals, with weekly rates, the sixth and seventh day are almost always discounted, so look for this when you're out for a cheap car rental.
10. Instead of picking up your rental at the airport, save money by picking it up at the shop, this'll reduce airport surcharges.

Find out the best way to buy a sports car

First, before going to a car dealership, buyers should already have an idea of the type of sports car they will be looking for.

Do they want a convertible, a two-seater, a mid-engine sport car, or a luxury sports vehicle? These are questions prospective car buyers need to ask themselves before they start their search. This will make the selection process much easier.

Buyers need to do their homework

It would be best for prospective buyers to do some research ahead of time. Read car magazines, talk to friends and memorize information on those sports vehicles buying guides that they might be interested in buying.

Don't forget to surf the net to get the latest news and information about the various models of sports cars that are on the market.

Compare prices

Pay a visit to a number of car dealerships. Look for special deals and discounts that they might be offering. This way a prospective buyer could get the best possible deal by comparing prices.

Budget

If money is a concern, prospective buyers should set a limit on how much they are going to spend, and stick to it!

Insurance premiums for sports cars tend to be relatively higher. This is reason prospective buyers need to set aside a portion of their budget for insurance. They always need to take into account the cost of: maintenance, operation, and repairs.

Timing is everything

The best time of the year to purchase a new sports car is near the end of the year when car dealerships are holding their annual end of the year sales. This is when dealers try to get rid of old models and try to replace them with new ones. The car dealerships offer especially low rates that they would not normally offer during these "end of the year" sales. So it would be best for customers to take advantage at this time.

Warranty

The warranty is an important part of your decision when buying a car. It is a part of the cost that customers pay for when they make a purchase, they must be sure that the terms of the warranty are satisfactory.

Buying a new sports car doesn't have to be a big headache. It can be fun and exciting, as long as buyers know what they are doing.

This is why they need to prepare ahead of time, before going on a car hunting expedition so that they can own the sports car of their dreams.

When Style Meets Performance: Exotic Cars 101

Searching for a quality luxury car will inevitably bring anyone to the rather apt adjective, “exotic”. Exotic food or exotic beauty may be more clearly defined, but what really makes for an exotic sports car?

Sleek and Elegant Design

Part of what makes an exotic sports car is the vehicles streamlined, sleek, and smooth designs, all of which serve functional purposes to the overall performance of the car albeit being so highly aesthetically pleasing.

Indeed, even exotic sports car makers know emphasis that car enthusiasts and racers put on design per se. After all, owning an exotic sports car in contrast to owning a car is, in itself, a status symbol. This status is endowed not only by the make of the car but also the style and visual appeal.

In fact, companies like Ferrari even employ design houses to come up with their car designs. Design powerhouse Pininfarina, for example, designed the 2002 Ferrari ENZO.

Breakneck Speeds

While design is one of the considerations of many car enthusiasts, the primary characteristic that by-far differentiates a sports car from the rest is its acceleration and maintainable road speed. When it comes to sports cars, it's all a matter of speed, speed, and more speed. A pretty car won't cut it if it cannot deliver the exhilarating ride that is expected of every sports car.

Exotic cars are continually challenging the rate at which a car can accelerate from 0 to 60 mph. Designs are beginning to be shaped from the engineering needs of the car, in order to suitably deliver a new record speed. As of the moment, the 1994 Dauer 962 LeMans continues to reign with 2.6 seconds. However, with the likes of the 2002 Ferrari ENZO being designed based on the specifications of making a fast car, expect faster sports cars in the near future.

One-in-a-Million

Indeed, exotic sports cars aren't the type that mass produced and you can't but then “off-the-lot”. Part of its exotic appeal is the fact that you can only have a certain number of models made available for sale. The rarer and more difficult to acquire, the greater a car's exotic value.

It's in the Name

Most cars don't need visualization to be called exotic, they just are. These would include your cult sports car classics' your Porsche, your Ferrari, your Lamborghini.

While an “exotic sports car” may be subjectively defined over a huge stratum, it's safe to believe that these qualities are more or less held in commonality by any definition. At any rate, one look at a car may be enough to give you a clue.

Simple Ways to Improve Gas Mileage

Gas prices have been growing increasingly higher for the past several years. Everybody wants to save money on gas especially now that the price has been rapidly increasing. One way to save gas is to increase gas mileage.

Here are some tips on improving gas mileage. These tips will not only save on gas but will enable the car to last for a longer time:

1. It is very important to keep the car well maintained. The efficiency of the car will be greater and the performance of the car enhanced if proper maintenance is performed. This in turn helps in improving the gas mileage of the vehicle.
2. The tires of the car should always be inflated properly. Tires that are not inflated properly will make the car's wheels have difficulty rolling and it will then require more energy and would consume more gas. Car owners can save gas by having the tires properly inflated.
3. Cars are heavily load consume more gas. It is recommended that unnecessary weight be removed from the car. The lighter the car's load, the less gas is consumed. Carriers can add weight to the car and should be removed when not in use.
4. Drive smoothly. If the driver uses the brakes a lot and then suddenly speeds up, or if the car is accelerated abruptly will result in greater fuel consumption. Therefore, it is recommended that you drive smoothly to improve gas mileage.
5. Always keep the car clean and washed. It is also recommended that the car be waxed regularly. This helps by improving aerodynamics and can help in improving gas mileage.
6. Another way to improve gas mileage is by saving on ventilation. A car's air conditioner uses more gas when being used. The air conditioner may be turned off and the windows opened when driving slowly - weather permitting. However, it is not recommended to open the windows when driving fast since it adds extra pressure and drag on the vehicle.

There are many ways gas mileage may be improved. Car owners should be responsible if they want to save on gas and money. It does not require big sacrifices to improve your vehicle's gas mileage. All it takes is a little responsibility and proper care of the car. These simple ways can each help improve gas mileage a bit but when done regularly and in combination will help save a great deal of money.

Kenwood Car Stereo Lets You Listen To The Future Of Car Audio.

This brand is a household name for every car audio enthusiast. Mention the name Kenwood car stereo and they will know what you're talking about.

Kenwood car stereos have produced high quality consumer electronics, test equipment and communication equipment since 1946. Kenwood car stereos primarily specialize in the design, engineering and manufacture of wireless communication infrastructure but are also renowned in the production consumer mobile and home entertainment systems. Kenwood car stereos are also committed to creating the finest quality components with state of the art technologies that has earned them a huge following in the audio products scene.

At present, Kenwood car stereos have a very impressive product lineup that would make anyone drool over, whether he is an audio enthusiast or not. For the regular Joe who isn't really into technical stuff, and is just looking for something nice to put into his ride, Kenwood car stereos offer sleek designs that will surely satisfy anyone's craving for aesthetic. Tech-freaks and geeks will also be impressed with the specs a Kenwood car stereo has.

A lot of Kenwood car stereo units nowadays include popup LCD panels for watching VCD/DVD movies. The Kenwood KVT-717DVD 7.0' Wide, Fully Motorized In-dash Monitor DVD/WMA/MP3 Receiver is a good candidate for any situation.

- 7.0 inch Wide Color TFT Active Matrix Display
- Full-automatic Open/Close with slide and angle adjustments
- Interactive Touchscreen Control with OSD
- Audio Easy Control Mode while Playing Visual Source
- Selectable Wall Paper (6 Patterns)
- Installer/Backup Memory of Audio/Video Setup
- Maximum Output Power : 50W x 4 (MOSFET Power IC)
- 3 Preouts with 5V Pre-out Level
- 2 RCA AV Inputs / 1 RCA AV Output
- Video Input for Rear View Camera
- RGB Input for Navigation System

- External Media Control - iPod Ready
- Dual Zone Source & Volume Control
- AUX Input
- Gold Plated 3 Preouts with 5V Pre-output Level

The Kenwood car stereo auto slide detachable faceplate allows you to take the faceplate (one which has all the buttons) in order to prevent theft by taking away the functionality of the unit left in the car.

National Car Rental, Quality Through the Years

The National Car Rental is one of the oldest and the pioneer in the car rental business. In 56 years of business, the National Car Rental has pioneered amongst its most famous, the one way rental feature, for those people who'd want to rent a car in one town and leave it in another, which makes it more convenient for the renter.

National Car rental was also the first car rental company to computerize its reservation operations. With the introduction of "Telex" computers to their system, reservation process has improved moving to a faster and more hassle free renting.

And since the airline industry deregulation in 1976, causing increase in airline travel costs, national car rental gave flat rates for car renters, who chose renting cars rather than flying.

National car rentals is also one of the earliest companies to start corporate account business back in the 70's. Through this program, National has focused on the corporate traveler more so than any other company. It was also the first in the rental industry to start a frequent renter program. It was also the first to use paperless car rentals and use computers to make dealings faster; they called this the "Emerald Club" and the "Paperless Express Rental Agreement". The "Emerald Aisle" program enables customers to select the cars that they want, with paperless ease, bypassing the rental counter, and getting them on their way faster and more efficiently. The "Choice Rental Process" in addition enabled customers to choose the exact car that they want, and "QuickRent" that gives non Emerald Club members to skip the rental counter when they complete the deal online.

National car rental is now affiliated with many different companies, all to improve the customers renting experience. These companies include, Air Canada, Air Miles, Air France, Alaska Airlines, Alitalia, America West airlines, American Airlines, ATA airlines, Delta Airlines, Continental Airlines, Frontier Airlines, Hawaiian Airlines, Iberia airlines, Midwest airlines, Lanchile, United Airlines and Northwest airlines all having frequent flyer and miles/kilometer programs that can be applied to car rentals as well, some of these airlines even consider national car rental miles, for air miles.

Other affiliates include Coast Hotels and Resorts, which give lower rates for national customers that stay in their Hotels, Hilton Family of Hotels, which let you ear 250 HHonors form their Hilton Honors Points and miles, for every rent from national car rental, as well as American Express who lets you earn points when you've enrolled for their program for national car rental.

Aside from all the discounts a features that you will acquire through their affiliates, National Car rentals offer a wide range of vehicles for you to choose from, the classes of cars that you could possibly rent form national cars are endless, the types of vehicles that you'll be able to rent are classified as subcompact, compact, intermediate, full-size, premium, luxury, sports utility, Mini van and convertible.

National Car rentals also have special offers for their customers, one of which is the "Last minute specials to go" which offers different specials every week at different locations. The other special, the "Great internet rates - Book ahead special" gives discounts fro those that reserve their cars early in the internet. The weekend value Rates - Book ahead special offers lower weekend rates. National car also offers internet only discounts also a book ahead special, which applies to mini vans and SUVs.

Getting thrifty car rentals

When planning to travel to other countries or even just to a different state, car rental has always been a must especially for traveling business men who need to go to one place to another. However, in spite of whatever "status" they may have, business men as well as ordinary travelers still opt to find and avail of the most thrifty car rentals that they could find. Thrifty car rentals usually abound, whether it be on directories, the internet or wherever it is that you can find service advertisements. It really is just a matter of choosing the best thrifty car rental for you and your needs.

Convenience is always a must whenever a person travels, this is pretty much while a lot of people opt to avail of thrifty car rentals, aside from having the convenience of being able to go whichever place they want without the hassle of hopping from one kind of mass transportation to another, they still get good value for their money.

A good example of a reputable thrifty car rental service company in the country is the Alamo car rental company. A lot of people actually recommend availing its thrifty car rental service, because of aside from being practical, they provide good and efficient service to their customers. From providing their customers with a wide range of vehicles to choose from, cars, RVs, basically just whatever type of vehicle that you may need for your travels. They also have various travel programs that you can choose from, this thrifty car rental has actually created various customer programs to suit each and every one's needs and demands. From corporate programs to government contractor programs, thrifty car rentals surely is their line of expertise.

Another good reason for choosing the Alamo car rental service as your thrifty car rental option, is their strict adherence to quality of service, they've really made a name for themselves by making sure that their customers' needs are always kept and they've made it a point to keep their good customer feedback by assuring their customers (as well as those who are just browsing) that they provide quality, yet thrifty car rentals.

Thrifty car rentals should never really be a hassle to your traveling needs (or demands), it is pretty easy to land on a huge list of companies that are able to provide quality yet thrifty car rentals. Just be sure to keep a keen eye on the companies that you are choosing from, unfortunately, in spite of a lot of thrifty car rentals who really do try to make an honest living by providing good, quality service to its customers, some sleazy thrifty car rentals still circulate in the market. Be sure to be cautious still when choosing, some may offer really low rates but their cars may be not of real good quality, simply put, the reason why they're offering thrifty car rentals may be because of their defective cars.

Look out for "signs" when you're choosing. Ask around, from your family, friends, colleagues and especially your travel agent in which of these thrifty car rentals would they actually recommend. Weigh out your options based on your needs, wants and most importantly, your budget. Of course, having a limited budget shouldn't really just force you to end up settling with just any thrifty car rental service, shelling out a little more may not really hurt you. In the end, when it comes to looking for thrifty car rentals, it really is more of the quality of service that they provide which should matter to you.

Conclusion

This E-Book Was Created By **TheViralMonsters**

The Viral Monsters was offering free re-brandable e-books. I lost most of them through a computer crash and my re-brander quit working so I decided to just create e-books with good advice for the readers to enjoy.
